Protection degree IP20 - DIN rail; Space saving

New revolutionary product, with Ethernet on board provided with protocol connections: HTTP, HTTPS, SNMPv1/2c/3, Modbus TCP/IP. The device also features the ADELSYSTEM protocol for connecting other ADELSYSTEM devices.

Power Management: Thanks to the All In One units (DC-UPS), it will be possible to optimize power management. The available power is automatically allocated between load and battery, supplying power to the load is the first priority of the unit, therefore it is not necessary to double the power, because also the power going to the battery will go to the load if the load so requires. The maximum available current on the load output is 3 times the value of the device rated current I_n .

Battery Care: it is the concept based on algorithms that implement rapid and automatic charging, four charge phases, battery charge optimization during time, flat batteries recovery and real time diagnostic during installation and operation. The Real Time Auto-diagnostic system monitors battery faults such as sulfated or shorted battery elements, reverse polarity connection, disconnection of the battery; such faults can be easily detected and removed with the help of Diagnostic Blink Codes or through web server. The continuous monitoring of battery efficiency reduces battery damage risk and allows a safe operation in permanent connection. Each device is suited for all battery types, by means of manual configuration by push button or web server it is possible to set predefined curves for Open Lead Acid, Sealed Lead Acid, Gel, Ni-Cd (option). Five charging levels are pre-programmed (recovery, boost, bulk, absorption, float / trickle charge), but they can be changed by the user. With a rugged casing for DIN rail mounting, IP20 protection degree, the product is extremely compact and cost effective.

Interconnections: The platform communication for ADELSYSTEM devices allows the connection of all components in a simple but very powerful way via Ethernet. Communication is based on various protocol: Modbus TCP/IP, SNMP or HTTP/HTTPS, depending on your application. The CANopen-based ADELSYSTEM allows to communicate with all the accessories provided by ADELSYSTEM and to develop an independent system for electrical continuity. At the same time, it allows monitoring and control all parameters in the system, even from the other side of the world, by means of application tools on the cloud. ADELSYSTEM allows you to implement very simple but sophisticated monitoring and control for your energy system and opens your mind to new ways to approach your applications.

Norms and Certifications: The CE mark in conformity to EMC 2014/30/EU: Electromagnetic Compatibility Directive; 2014/35/EU: Low Voltage Directive; ROHS 2011/65/EU: Restriction of the use of certain Hazardous Substances in Electrical and Electronic Equipment (RoHS), as amended by 2015/863/EU. EMC Immunity: EN61000-6-2; EMC Emission: EN61000-6-3. According to: Electrical Equipment for Machinery EN 60204; Electrical safety (of information technology equipment) IEC/EN 62368-1.
